L4 ANSWER 1 OF 1 MEDLINE on STN DUPLICATE 1
AB A continuous fermentation process has been developed in Pichia pastoris
(P. pastoris) with the glyceraldehyde-3-phosphate dehydrogenase (GAP)
promoter in order to produce large quantities of recombinant human
chitinase (rh-chitinase) for preclinical studies as a potential high-dose
antifungal drug. Expression levels of about 200 to 400 mg/L have been
demonstrated in fed-batch fermentations using strains with either the
traditional methanol-inducible or the constitutive GAP promoter.
Proteolytic degradation of the enzyme was typically seen in fed-batch
fermentations. Continuous **production** of the enzyme by P.
pastoris with the **GAP** promoter was demonstrated in a

1.5-L working volume fermentor using either glucose or glycerol as the carbon source. The fermentation could be extended for >1 month with a steady-state protein concentration of approximately 300 mg/L. Cell densities were >400 g/L wet cell weight (WCW) (approximately 100 g/L dry cell weight [DCW]) at a dilution rate (D) of 0.83 day⁻¹ or 1.2 volume exchanges per day (VVD). No proteolytic degradation of the enzyme was seen in the continuous fermentation mode.
